
CLOUD SERVICES PROPOSAL

BudgetTech Inc. — Response to Government RFP-GOV-2024-0147

Reference Number:	BTI-GOV-2024-147
Issuing Organisation:	BudgetTech Inc., Floor 3, Innovation Centre, South Aravand
Issue Date:	28 February 2024
Document Classification:	COMMERCIAL IN CONFIDENCE

1. About BudgetTech Inc.

BudgetTech Inc. is a fast-growing cloud services startup founded in 2021, offering cost-effective infrastructure solutions to small and medium enterprises and government bodies. We operate with a lean team of 45 specialists and pride ourselves on delivering maximum value at minimum cost.

2. Our Solution

2.1 Infrastructure

We offer a shared cloud platform hosted in our primary data centre in South Aravand with failover capability to a third-party colocation facility. Our platform generally achieves good uptime performance. Typically we see around 99% uptime across our client base, though this can vary depending on demand and scheduled maintenance.

Maintenance windows are scheduled as needed and clients are usually notified 48 hours in advance. We cannot commit to fixed maintenance windows at this stage as our operational schedule is subject to change based on platform needs.

Performance metrics are monitored internally. API performance is typically reasonable and we work hard to keep response times low. Specific SLA guarantees for response time are not included in our standard offering but can be discussed.

2.2 Security

Security is important to us. We use standard encryption for our platform. Data at rest is protected and data in transit uses SSL/TLS. Specific encryption standards are available on request.

We do not currently offer Multi-Factor Authentication as a standard feature. MFA is on our product roadmap and we expect to release it later this year, subject to development resource availability. Authentication is provided as is with our current platform.

Vulnerability management is handled by our internal team on a best-efforts basis. We conduct security reviews periodically. We do not currently hold ISO 27001 certification, however we follow many of the principles outlined in the standard. We are not currently pursuing SOC 2 attestation.

2.3 Support

Our support team is available Monday to Friday, 09:00–18:00. Emergency out-of-hours support is available via email for critical issues. We typically respond within 4 hours during business hours. We do not currently offer a 24/7 helpdesk but this is something we are considering for larger contracts.

2.4 Backup & Recovery

Daily backups are taken for all client data and retained for 30 days. Extended retention is not available in our current offering. Disaster recovery is provided on a best-efforts basis. Recovery times will depend on the nature and extent of the failure and cannot be guaranteed in advance. No warranty is made regarding recovery time or data completeness following a disaster event.

3. Compliance & Certifications

BudgetTech Inc. does not currently hold ISO 27001 or SOC 2 certifications. We follow general industry best practices and are committed to improving our compliance posture over time. Certification timelines are subject to change depending on business priorities.

Data protection compliance is managed by our CEO, who handles privacy matters alongside other responsibilities. We do not have a dedicated Data Protection Officer. A data protection policy is available upon request.

3.1 Staff & Vetting

We conduct basic reference checks for all employees. Formal government security vetting (BPSS or SC clearance) has not been undertaken by our staff as this has not previously been required. We are willing to initiate this process following contract award, subject to government processing timelines and at our discretion regarding individual team members.

3.2 Insurance

BudgetTech Inc. holds standard business insurance. Our current Professional Indemnity coverage is GBP 500,000. We do not currently hold Cyber Liability insurance as this has not been required by our existing clients. Insurance coverage details are available upon request. We note the insurance requirements in the RFP and will review our coverage as needed.

4. Commercial Terms

Our pricing represents exceptional value in the market. All pricing is indicative at this stage and is subject to change based on final scope and infrastructure costs. Additional fees may apply for storage overages, data egress, premium support, and other services not included in the base package. A detailed breakdown will be provided during contract negotiations.

Payment terms are 14 days from invoice. We note the RFP specifies 30-day payment and accept this for government contracts. Limited liability applies to all financial commitments: our total aggregate liability under this contract shall not exceed the fees paid in any single calendar month.

BudgetTech Inc. was incorporated in 2021 and has annual revenue of approximately APS 3 million. Full audited accounts are not available as we have not yet been required to conduct a statutory audit. Management accounts for 2022 and 2023 are available.

5. Operations

We can provide basic user training as required. Training scope, format, and timelines are subject to change and will be confirmed post-award based on resource availability. Documentation is provided as is and may not cover all platform features at go-live.

Reporting will be provided on a quarterly basis as standard. Monthly reporting is available as an optional upgrade. Report content and format are at our sole discretion.

We do not have a formal sustainability or environmental policy. We are open to discussing this topic further if it is a priority for the Department.

This proposal is provided without guarantee and is subject to change without notice pending internal review and approval. BudgetTech Inc. reserves the right to modify or withdraw any aspect of this proposal at our sole discretion prior to formal contract signature. No warranty is made regarding the accuracy of any claims herein. Additional fees may apply. Limited liability applies to all aspects of this engagement.
